Change vault folder checks behavour (in both Multimedia vault and document vault)
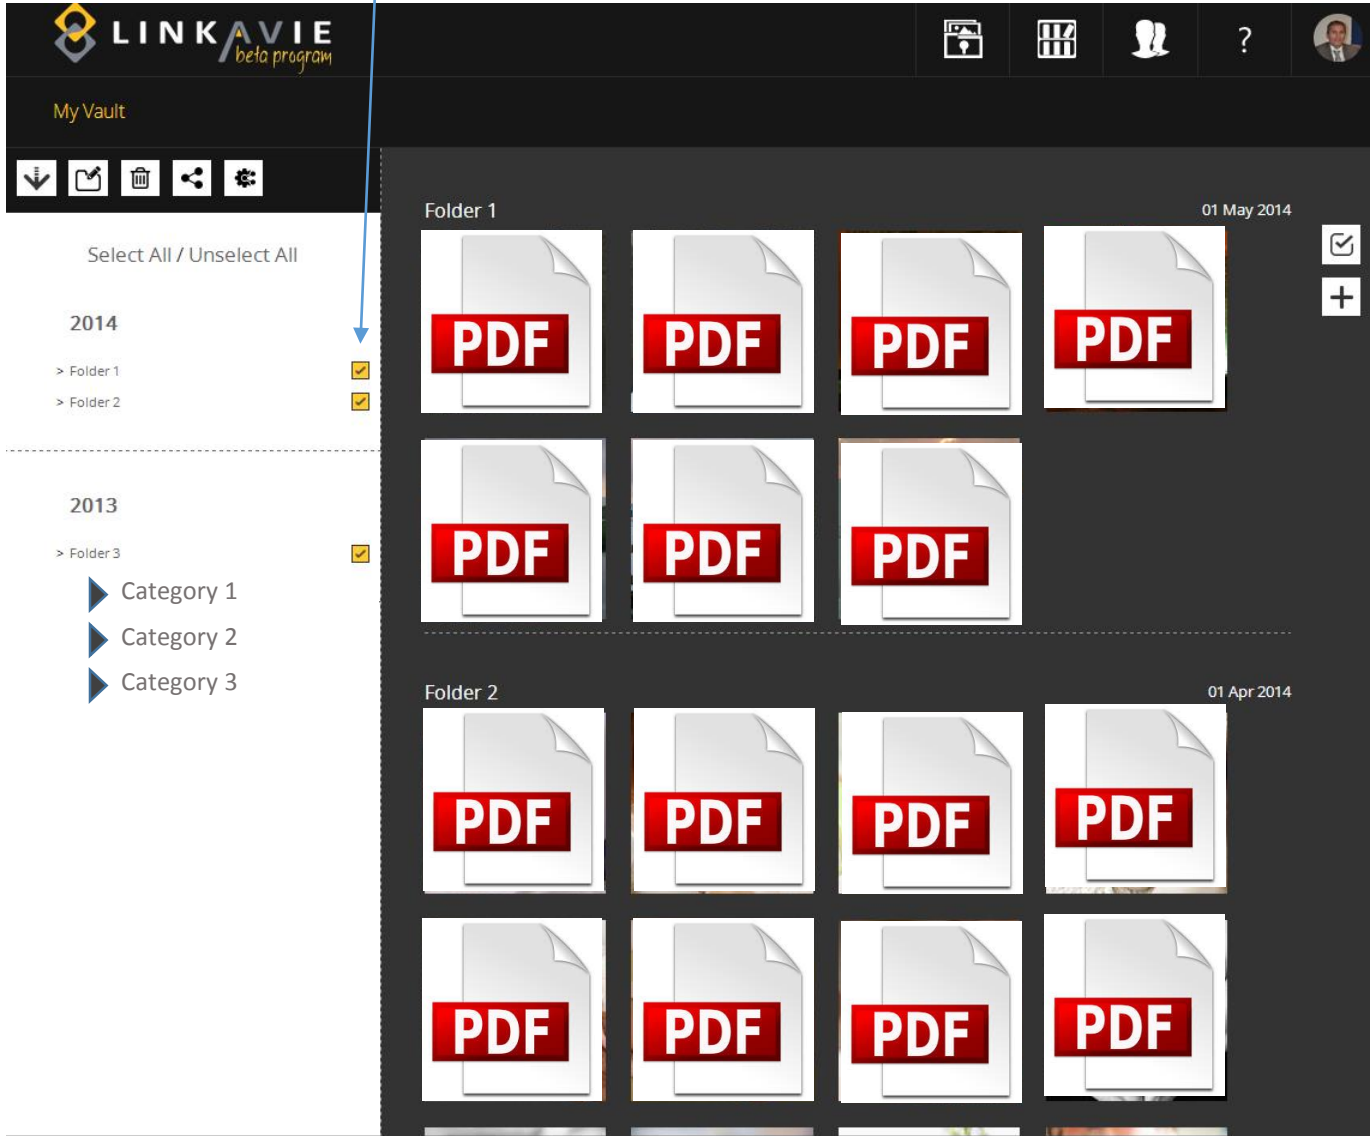

This is what we are talking about

- Pictures, video (in vault) or documents (in document vault) are always displayed by default (checkboxes unselected by default).
- When click on folder name, slides down to the folder content and (for documents vault) show categories sub-folders.
  - If user clicks on « category 1 », will show only files of category 1 inside folder 3.

- All checkboxes are unchecked by default AND folder menu don't appear.
- When user checks one or several folders, then, also slide down/up to the first selected folder (like today), not selected folders disappear (like today), and the folder menu appear.
- If user unselect all, then all folders appear or stay appeared + folder menu disappear
- If user selects all, all folders appear or stay appeared + folder menu appear

=> This way, the user better understand that actions are related to selected folders, and we never have an empty view
